Thurunu Hashitha

Full stack developer

hasithathurunu2@gmail.com 0705656164 Horana Thurunu GitHub LinkedIn

Summary

Software Engineering undergraduate passionate about building impactful digital solutions. Skilled in Full-Stack Development with React, Node.js, and MySQL, as well as mobile app development using React Native and Flutter. Experienced in creating responsive web applications, cross-platform mobile apps, and IoT-based systems. Focused on clean code, user-centric design, and continuously learning new technologies to build innovative solutions.

Education

Sri Lanka Technology Campus — BSc (Hons) in Software Engineering
Software Engineering — Padukka, Colombo • Oct 2022 - Dec 2026

IMBS Green Campus — Diploma in Information Technology • Second Class Lower(3.49)
Information Technology and Computing — Gampaha • Dec 2024 - Dec 2025

Experience

Cyber Yakku (Pvt) LTD — Dambagalla 91050
Software Engineering Intern — 6 Month

KGS Construction & Transport — Ampara 32000
Director — Operations — 1 year

Projects

SmartBiz – AI-Powered Business Management / ERP System — 1 Week
https://github.com/Thurunuhashitha/SmartBiz_backend

Tech: React, Node.js, Express.js, MySQL, AWS, OpenAI API
Developed a full-stack **AI-powered ERP/POS system** to manage inventory, sales, customers, and expenses. Integrated **OpenAI-based AI insights** to generate natural language financial reports, automated customer follow-up emails, and marketing content for business promotions.

Multi-User Expense Tracker — 1 Month
https://github.com/Thurunuhashitha/Multi-User-Expenses-Tracker-BackEnd

React , Express.js , MySQL , Deployment(AWS,ci/cd pipeline)

A comprehensive expense management system with multi-user support, real-time tracking, receipt image uploads, budget analytics, and automated financial reports. Built with modern technologies for optimal performance.

Expenses tracker Mobile Application — 1 Week
A cross-platform mobile expense tracking application built using React Native. This app allows users to securely log in and access expense-related data through a clean and intuitive user interface. It communicates with a RESTful backend API and uses JWT-based authentication for secure access.

React Native , React Hooks , React Navigation , Axios , AsyncStorage , JWT Authentication , RESTful API

Land Sale Website — 3 Week
https://github.com/Thurunuhashitha/EasyLand-BackEnd

Technologies: React.js | Express.js | Node.js | MySQL

A full-stack land sale platform built using React, Express.js, and MySQL. The system allows users to browse, search, and filter land listings with images and detailed information. The backend provides RESTful APIs for data management, while the frontend delivers a clean and responsive user interface.

Skills

React.js
Advanced
frontend, SPA, hooks, components, redux, API integration

React Native
Advanced
mobile app development, android, ios, navigation, asyncstorage, API integration

Node.js
Advanced
backend, express, REST API, JWT, middleware, authentication

MySQL
Advanced
relational database, joins, indexing, normalization

AWS EC2
Advanced
cloud hosting, linux server, deployment, EC2

Flutter
Familiar
mobile app, dart, UI design, state management

Arduino
Intermediate
IoT, sensors, embedded systems, serial communication

Interests

React Development
React.js, JavaScript, Component-Based UI, Hooks, MUI, Telwin

React Native Development
React Native, Mobile Apps, paper

DevOps & Cloud Engineering
DevOps, CI/CD, AWS

UI Animation
UI Animation, Transitions

Certifications

DIPLOMA IN INFORMATION & COMMUNICATION TECHNOLOGY 30/12/2025
Professor Sarath Amunugama

Bridging Programme for Information Technology Discipline in sltc 21/05/2022
SLTC

Sun Ray Institute of English Training 30/05/2019
Mr.Wijesiri Wijerathne
